ASSIGNMENT # 01

NORMAN'S MODEL:

A conceptual model of human action that explains the mental steps a user goes through when using an interface. It focuses on user thinking and consists of seven stages of action.

SCHNEIDER'S MODEL:

It defines guidelines and has eight golden rules. It ensures consistency and reduces the error chances. This model improves user satisfaction.

KLM MODEL:

Date _____

It predicts how fast user works. This model is based on physical action does not consider error. It is used to compare interface efficiency.

Assignment # 02

ABDUL SAMAD

IC04-0122-0138

Session:-

User data is stored on the server and the client keeps only a session ID, requires server memory or shared storage for scaling.

COOKIES:

Data stored in the browser and sent with every HTTP request, often used to store session ID or preference.

JWT:

Encodes user info in a signed token stored on the client. Stateless and scalable but difficult to invalidate before expiration.
